**TITUS** SharePoint Security™

As Microsoft SharePoint® becomes a critical platform for document and records management, administrators and content owners are faced with the challenge of protecting sensitive content and preventing data breaches. This can be a difficult task, especially when managing security policies manually within SharePoint.

The TITUS Security Suite for SharePoint enhances SharePoint security by automatically enforcing fine-grained access control and applying document markings to sensitive content. This promotes strong, consistent data governance over your SharePoint content. TITUS leverages existing document metadata combined with trusted attributes (claims) to ensure that security is applied automatically and consistently across all of your SharePoint content.

The suite is made up of products that can be purchased individually or as a bundle. TITUS Metadata Security automatically applies permissions and access control for sensitive content in SharePoint based on document metadata properties and trusted claims. In addition, mobile-specific access permissions can be defined based on information sensitivity, user identity, and mobile device. TITUS Document Policy Manager automatically converts documents to Adobe PDF® and applies visual labels to raise awareness of sensitive content, providing users with education on how to handle sensitive data.

Highlights

The TITUS Security Suite for SharePoint applies consistent security across all SharePoint content to enable strong data governance and compliance. The solution enables organizations to:

- Ensure the right people access the right information using metadata and claims
- Control mobile access to sensitive documents
- Safely store sensitive data alongside non-sensitive data
- Promote end user awareness and accountability for sensitive data
- Automate SharePoint security, including permissions management, access control, and document policies

TITUS security policies can be applied to a single document, or in bulk to hundreds of thousands of documents.

System Requirements

TITUS Security Suite for SharePoint works with Microsoft SharePoint 2013 and 2010 (Server and Foundation).

Complementary TITUS Products

TITUS Classification™ for Microsoft Office® provides classification and labeling for Microsoft Office Word®, Excel® and PowerPoint®.

SharePoint Data Governance Model and TITUS areas of expertise

TITUS Security Suite for SharePoint

Product Name	Key Features	Benefits
TITUS Metadata Security	Automates permissions management and fine-grained access control over sensitive content by leveraging document metadata properties combined with trusted attributes (claims).	• Ensures the right people see the right information • Leverages document metadata and trusted attributes (claims) to make dynamic access decisions • Controls mobile access to sensitive documents • Enables effective information governance
TITUS Document Policy Manager	Automatically applies visual labels (headers, footers, and watermarks) to Microsoft Office and Adobe PDF documents, and converts Office documents to PDF.	• Raises security awareness by automatically applying visual labels to Microsoft Office and Adobe PDF documents • Enhances document security and portability by automatically converting Microsoft Office documents to Adobe PDF • Promotes user accountability and traceability by marking PDF files with the user's name and a timestamp on download • Helps organizations comply with data protection regulations such as ITAR, HIPAA, CUI, GPMS and ISO 27001
TITUS SharePoint Security Software Development Kit	Enables organizations to integrate TITUS security policies for SharePoint with existing line-of-business applications.	• Applies policies via custom code to large numbers of existing libraries • Ensures security is applied consistently across all SharePoint content

About TITUS

TITUS solutions enable organizations to classify, protect and confidently share information, and meet regulatory compliance requirements by identifying and securing unstructured data. TITUS Classification Suite includes the leading email, document and file classification and marking solutions that enhance data loss prevention by involving end users in identifying sensitive information; and the TITUS family of classification and security solutions for Microsoft SharePoint. TITUS solutions are trusted by over 2 million users within more than 600 organizations in 60 countries around the world. Our customers include Dell, Nokia, Dow Corning, United States Air Force, NATO, Pratt and Whitney, Canadian Department of National Defence, Australian Department of Defence, and the U.S. Department of Veterans Affairs.
