## REAL SAVINGS

- ▶ Right decisions about buying and modernizing hardware and software
- ▶ Lower consumption for printers – printout monitoring
- ▶ Increased work efficiency - computer monitoring disciplines users
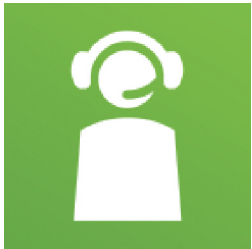

real savings

MODULE-BASED CONSTRUCTION

Ensures the scalability of the app and possibility of flexible configuration which may be suited according to individual needs and authorization of the users

EASY-TO-USE

An intuitive interface and service ensures that launching our system does not demand a costly implementation, and working with it is remarkably comfortable.

Incident notification from users or clients	✔	Helpdesk & GDPR
Incident management and knowledge base	✔	Helpdesk & GDPR
Remote control over a workstation	✔	Helpdesk & GDPR
GDPR management	✔	Helpdesk & GDPR

REMOTE DESKTOP AND SERVICE

Perform regular inventories and control workstations remotely. Support your users no matter where you are. Distributed infrastructure and distant locations can be managed efficiently from anywhere you choose.

- ▶ Preview of users' desktops
- ▶ Remote control over a workstation
- ▶ Access to files and registry without disturbing users' work
- ▶ Company Online – multiple users' screens in one view

COMPUTER USAGE CONTROL

The Statlook system gathers a wide range of data concerning computer worktime. With such information you are able to assess the actual need for new hardware and software. Moreover, with user activity control you enhance the level of security of the whole IT infrastructure and key data.
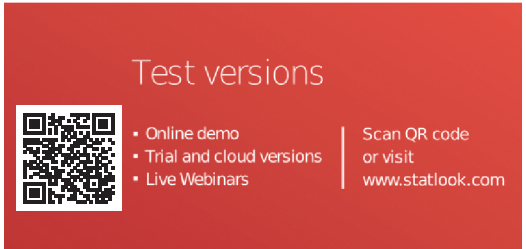

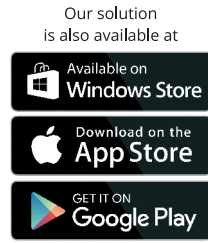

- ▶ Most frequently used applications
- ▶ Worktime breaks and users' activity
- ▶ Operations on external data drives
- ▶ Printer monitoring

INTERNET CONTROL

Avoid many risky incidents by gathering detailed data about users' activity on the Internet. Limit access to problem websites. Internet Control equals security of your network as well as reasonable usage of Internet transfer and better overall performance.

- ▶ Browsing history
- ▶ Internet monitoring – pie charts for managers
- ▶ Internet monitoring – on any browser that may be used
- ▶ Detailed statistical information

GDPR MODULE
NEW QUALITY OF PERSONAL DATA PROTECTION

Use statlook to perform personal data inventory, check the localizations and their security. Grant access to personal data files for employees and companies. You can also manage the requests for data erasure and security breach notifications. Every statlook module is written in accordance with GDPR rules. The features of the whole system enhance the security personal data in many contexts e.g. hardware (database storage and processing), software (processing data) and users.
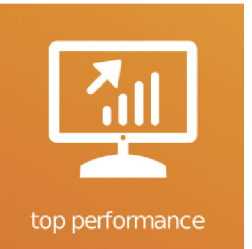

- ▶ Personal data inventory and management
- ▶ Rational risk and data breach assessment
- ▶ Records of processing activities
- ▶ Suitable for IT Departments, Processors and Controllers
- ▶ Personal data management
- ▶ Register of processing activities
- ▶ Right to be forgotten
- ▶ Solution for DPO, PDC, IT Dept.

WHY STATLOOK?

ENHANCED SECURITY

- ▶ Software licence authentication checks
- ▶ IT infrastructure security – helpdesk, component control, task automation
- ▶ Data security – blocking USB drives, monitoring user activity

enhanced security

TOP PERFORMANCE

- ▶ Complex knowledge about infrastructure and users – report analysis
- ▶ Efficient IT supports- remote desktop, online helpdesk, mobile app
- ▶ Task automation – scripts enhancing everyday IT department's performance

top performance

EASIER MANAGEMENT

- ▶ Efficient equipment – adapted to users and software needs
- ▶ Efficient software – always up-to-date, full licence compliance
- ▶ Efficient workers – no more cyberslacking, in an optimized environment

easier management

Complete **IT** resource management system

remotely · locally · online · mobile

HARDWARE INVENTORY

Automated remote inventory system ensures comfort and time saving. Keeping your inventory up-to-date lets you manage your IT resources efficiently and plan new purchases with ease.

- ▶ Hardware register and management
- ▶ Accounting and financial specification
- ▶ Service issues recording
- ▶ Detailed data about hardware components

LICENSE MANAGEMENT

The licence manager is a useful tool which reports on the validity of purchased software. You can identify any expired licences, assess your company's needs and plan your budgets accordingly.

- ▶ Temporary licenses
- ▶ Upgrade and OEM licenses
- ▶ Licensing attributes
- ▶ Automated license summary
- ▶ Application packages settlement

LICENSING AUDIT REPORT

The remote software licensing audit (licence compliance) helps to identify unlicensed applications and unauthorized multimedia files easily. Ensuring the legality of the software means your organization is better protected from the risk of legal action.

- ▶ Remote audit
- ▶ Intermediary audits
- ▶ Photo documentation
- ▶ Compliant with the norms of professional audits
- ▶ OS and Software bundle verification

statlook®

USB DRIVE MANAGEMENT

The Datalook module is an easy to use tool for external memory drive management. It increases security and enables you to prevent data breaches and losses.
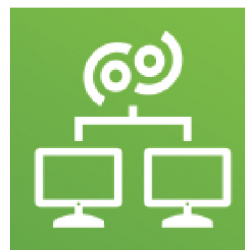

- ▶ Blocking access to drives (including USB, HDD, SSD, Pendrive)
- ▶ Configuring permissions (accessing, reading and launching files)
- ▶ Authorizing external memory drives

NOTIFICATION SYSTEM

Current notifications are of key importance for an efficient network and supporting your end-users. Keeping on top of the flow of information allows you to assess the situation properly, react accordingly and deal with any threat you may encounter.

- ▶ Intuitive configuration
- ▶ Clear notification system and assigning priorities
- ▶ Alerts concerning computer stations, users and groups
- ▶ Centralized notification management

HELPDESK

Everyday user support should not be a problem anymore. Notification database, incident categorization, graphic summaries and the company's knowledge base speed up and facilitate an adequate response to each user's needs.

- ▶ Incident notifications from users
- ▶ Registering and categorizing incidents
- ▶ Graphic summaries
- ▶ Remote support
